

# CodeNova Business Website

## API Documentation

**Version:** 1.0   **Project:** CodeNova Business Website

Defines the public and protected API contract for the CodeNova website. Exact schemas can be refined during implementation while preserving these security and behavior rules.

## 1. API Standards

- Base path: /api.
- JSON request/response format.
- Use HTTPS in production.
- Validate all input server-side.
- Return consistent error objects.
- Use authenticated sessions for admin routes.

## 2. POST /api/leads

- Purpose: create a project inquiry.
- Body: name, email, phone, company, country, service, budget, message, source.
- Success: 201 with lead confirmation identifier.
- Errors: 400 validation, 429 rate limit, 500 server failure.

## 3. GET /api/leads

- Purpose: admin lead listing.
- Auth: required admin/staff role.
- Query: page, limit, status, service, search, sort.
- Success: 200 with paginated records.
- Errors: 401/403/500.

## 4. GET /api/leads/:id

- Purpose: retrieve one lead.
- Auth: admin/staff.
- Success: 200.
- Errors: 401, 403, 404.

## 5. PATCH /api/leads/:id

- Purpose: update status, notes or assignment.
- Auth: admin/staff.
- Body: permitted fields only.
- Success: 200.
- Errors: 400, 401, 403, 404.

## 6. DELETE /api/leads/:id

- Purpose: delete a lead where policy permits.
- Auth: admin only recommended.
- Success: 204 or 200.
- Errors: 401, 403, 404.

## 7. POST /api/consultations

- Body: name, email, company, project\_type, preferred\_date, preferred\_time, message.
- Validate availability if calendar integration is connected.
- Store request and send confirmation.
- Success: 201.

## 8. POST /api/estimator

- Body: project\_type, complexity, selected\_features, optional contact fields.
- Returns indicative estimated\_min and estimated\_max.
- Never treat calculator output as a binding quotation.
- Success: 200/201.

## 9. GET /api/services

- Public endpoint.
- Returns active services ordered by sort\_order.
- Success: 200.

## 10. GET /api/portfolio

- Public endpoint.
- Optional query: category, featured.
- Returns published projects only.
- Success: 200.

## 11. GET /api/blog

- Public endpoint.
- Query: page, category, search.
- Returns published posts only.
- Success: 200.

## 12. Admin Content APIs

- POST/PATCH/DELETE /api/admin/services.
- POST/PATCH/DELETE /api/admin/portfolio.
- POST/PATCH/DELETE /api/admin/blog.

- All require admin authorization and server-side validation.

## 13. Error Format

- Recommended: `{"error":{"code":"VALIDATION_ERROR","message":"Invalid request","details":{}}}`.
- Do not expose stack traces or internal database errors.

## 14. Security

- Rate-limit public endpoints.
- Authenticate protected endpoints.
- Authorize every protected operation.
- Validate body/query/path parameters.
- Log security-relevant failures without sensitive payloads.
- Use CORS restrictions when separate origins are used.

## Document Relationship

This document complements the CodeNova PRD, TRD, Security & Privacy Document and Frontend Requirements Document. Implementation should use the approved business information and actual production configuration rather than placeholders or unverified claims.
